QUERETARO, MEXICO · (under construction) Tractors; Components.

Massey-Ferguson Limited

A WORLD-WIDE ORGANIZATION

Massey-Ferguson has been engaged for many years in extending farm mechanization on a world-wide scale. The MF group of companies presently manufactures in 36 plants located in ten countries and sells its products in 166 countries. It is the largest maker of tractors, self-propelled combines and diesel engines.

The business originated with Daniel Massey's farm implement shop in Canada in 1847. Within 20 years he was exporting to European markets. In 1891 he joined with A. Harris & Son to form Massey-Harris Company Limited. During the next 45 years the company established factories in the United States, France, Germany and Australia.

Massey-Harris' greatest achievement was the perfection in 1938 of the self-propelled combine. This one-operation machine does the work of 300 or more men per day and can be used to harvest wheat, corn, rice and other crops.

By merging with Harry Ferguson's interests in 1953 the company acquired the revolutionary Ferguson tractor. The Ferguson System, introduced in 1936, made it possible for a small, lightweight tractor to do the work of a machine twice the size. Hydraulic control and three-point linkage greatly increased traction by transferring the weight of rear-mounted implements to the tractor's rear wheels. Today, 85 per cent of all tractors built use the Ferguson System or variants thereof.

The company's newest tractors incorporate Pressure Control—an extension of the Ferguson System to trailed implements which enables MF tractors to do more jobs under more farming conditions anywhere in the world.

With the Ferguson merger, the company became Massey-Harris-Ferguson Limited. This was shortened in 1957, to Massey-Ferguson Limited.

In line with its policy of manufacturing the greater part of its products, MF purchased in 1959 F. Perkins Limited of England, now producing more than 300,000 diesel engines annually, and tractor manufacturing facilities in England and France. In 1960 the company bought G. Landini & Figli S.p.A., the second largest tractor maker in Italy.

Other acquisitions and new projects include purchase of minority interests in a tractor assembly company in India and in Motor Iberica, S.A., Spain's leading producer of tractors and trucks, and the start of construction of a tractor manufacturing plant in Mexico.
